**Protect your boat with  
Vantage Protection Film<sup>TM</sup>!**

## You're proud of it, now protect it!

Vantage Protection Film<sup>TM</sup> is virtually invisible and extremely durable. Developed by 3M in the 1960's, Scotchgard<sup>TM</sup> Protection Film was originally developed to eliminate abrasion on military helicopter blades and F-14 nosecones to protect aircraft from flying debris and sand abrasion. Over the last 20 plus years, the automotive industry has used protection film to protect vulnerable areas. There is a reason that respected manufacturers such as Porsche, Mercedes, Toyota, GM, BMW and more use protection film....it works!

## What is it?

A durable, high-grade, colorless urethane film applied to high impact, high traffic areas.

## Why do you need it?

**Keep your boat free of scratches caused by:**

Transom: Wakeboards, Skis, Kneeboards

Tie Down Strap Areas: Abrasion from straps

*"Wow- Great product! We just did our install right before pulling the Indy Pro Am Wakeboard Tournament last weekend and I don't see any new marks on my boat. It still looks brand new."*

## FAQ's

**Q: How can I get Vantage Protection Film installed on my boat?**

**A:** If you have a current model inboard ski boat, we have custom cut kits that are available through our Vantage dealer network.

**Q: Does it alter the appearance of my boat?**

**A:** No. The material has an extremely clear and glossy finish which blends into the finish of your boats OEM gelcoat.

**Q: Can you wax over the material?**

**A:** Yes. There is a clear coat incorporated into the film (just like OEM paint) so it will not be damaged by waxing. The film can also withstand light buffing if needed.

**Q: Can the film be removed after it is applied?**

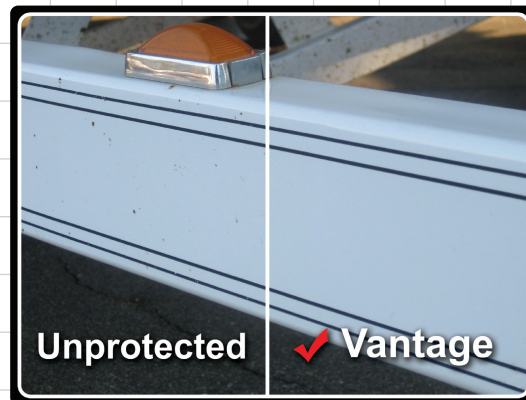

**A:** Yes. It can be removed at anytime.

It's not a matter of "if" you will get damage, it's a matter of "when".
